JACKET VINEYARD COVERS

Hail, bird, insect, deer and sun protection technology by the JACKET net system. Economical by the mounting and the annual handling. Each row length up to 1000 m and more is possible. The JACKET net system is even applicable for steep slopes and hilly terrain.

Advantages in the vineyard work:

- the cutting of the leaves will be more simplified
- the conduction of the shoots is spared
- less susceptible to wind, during spray plant protection products
- significantly less leave injuries when cutting leaves
- by using a pneumatic leaf remover, the net can remain closed

For winter storage the net can be rolled up swiftly and efficiently. In the rolled up state it is possible to use harvester and leaf remover. The rolled up net is secured with a Winterfix.

Easy opening with only one hand, because of the WIESEL plattette. Free access to the grapes, by quick hanging of the net.
